

Year 2: Food Chains

Living

Dead

Never living

Life processes - These are the things that all living things do. They move, breathe, sense, grow, make babies, get rid of waste and get their energy from food.

Living - Things that are living have all the life processes.

Dead - Things that are dead were once living. They did have all the life processes but don't now.

Never living - Things made out of metal, plastic or rock were never living. They never had the life processes.

Food chain - A food chain shows how each animal gets its food. Food chains are one of the ways that living things depend on each other to stay alive.

Food sources – This is the place a living thing's food comes from.

Food chains - The arrows mean 'is eaten by'.
