## Year 11 Maths Learning Journey

## Spring Term 6

Revision and communication: Show that

| Core knowledge | Reference |
| :--- | :---: |
| Show that with number <br> "How can you determine whether two fractions are equivalent?" | WORKSHEET |
| Show that with algebra <br> "What's the same and what's different about solving an equation and an <br> inequality?" | WORKSHEET |
| Show that with shape <br> "What area formulae to you know? What does each letter represent?" | WORKSHEET |
| Show that with angles <br> "What's the difference between corresponding and corresponding-interior <br> angles?" | WORKSHEET |
| Show that with data <br> "Which averages are useful in different situations? Why?" | WORKSHEET |
| Show that with vectors (H) <br> "Can a translation always, sometimes or never be described as a vector?" | WORKSHEET |
| Show that with congruent triangles <br> "What are the four sets of conditions that show a pair of triangles are <br> congruent? What does each letter stand for in the abbreviated forms?" | WORKSHEET |
| Form proof with congruent triangles (H) |  |
| "What's the same and what's different about showing that a pair of triangles <br> are similar triangles and showing that a pair of triangles are congruent?" | $\underline{\text { WORKSHEET }}$ |

## Learning Checkpoints

| LC Title | Completed | Dirt |
| :--- | :--- | :--- |
| Show that |  |  |

Corresponding Angles

Interior Angles

## Key Vocabulary:

Adjacent: two angles are adjacent if they have a common side and a common vertex.
Alternate: see diagram
Circumference: The distance around a circle (its perimeter).
Area: a measure of the size of any plane surface. Area is usually measured in square units.
Co-interior: see diagram
Common: Values that are the same.
Component: a connected subset of a set, not contained in any other connected subset of the set
Congruent: The same shape and size (but we are allowed to flip, slide or turn).
Corresponding: see diagram
Equation: A mathematical statement showing that two expressions are equal.
Equivalent: equal in value, amount, function, meaning, etc.
Expression: algebraic expression consists of unknown variables, numbers and arithmetic operators.
Identity: Identities are sometimes indicated by the triple bar symbol $\equiv$ instead of $=$, the equals sign. Formally, an identity is a universally quantified equality.

Interquartile range: describes the middle $50 \%$ of values when ordered from lowest to highest.
Mean (average): The mean is the average of the numbers. It is easy to calculate: add up all the numbers, then divide by how many numbers there are

Median: The middle of a sorted list of numbers.
Mode (average): the value that occurs most often
Parallel: In Euclidean geometry, always equidistant. Parallel lines, curves and planes never meet however far they are produced or extended.

Product: The result of multiplying one number by another.
Range: The difference between the greatest value and the least value in a set of numerical data.
Sequence: A succession of terms formed according to a rule.
Similar: Two figures are said to be similar if they are the same shape
Simplest form: A fraction that has been reduced fully.
Surd: an irrational number expressed as the root of a natural number
Transformation: Transformation means to change. Hence, a geometric transformation would mean to make some changes in any given geometric shape.

Translation: A transformation in which every point of a body moves the same distance in the same direction. A transformation specified by a distance and direction

Trigonometry: the branch of mathematics concerned with specific functions of angles and their application to calculations

Vector: The instruction that translates a shape up, down or from side to side but it does not change its appearance in any other way.
