

## Science Department Curriculum and Assessment Map

	Half Term 1	Half-Term 2	Half Term 3	Half Term 4	Half Term 5	Half Term 6
Year 10	Molecules and Matter	Radioactivity	Changes in energy	Electrical Circuits	Electricity in the home	Forces and motion
Fundamental Knowledge	<ol style="list-style-type: none"> <li>Describe the arrangement of particles in a solid, a liquid, and a gas.</li> <li>Explain why the mass of a substance that changes state stays the same.</li> <li>Write down what the melting point of and the boiling point of a substance mean.</li> <li>Describe the different changes of states.</li> <li>Use a temperature-time graph to find the melting point or the boiling point of a substance.</li> <li>Explain the different properties of a solid, a liquid, and a gas.</li> <li>Describe how increasing the temperature of a substance affects its internal energy.</li> </ol>	<ol style="list-style-type: none"> <li>Name the three types of nuclear radiation.</li> <li>Name the three sub-atomic particles found in an atom</li> <li>Describe some safety precautions used when dealing with radioactive materials.</li> <li>Describe how a Geiger counter can be used to detect radiation.</li> <li>Identify natural and man-made sources of background radiation.</li> <li>Compare the plum pudding model and the nuclear model of the atom.</li> <li>Describe the evidence provided by the Rutherford scattering experiment.</li> </ol>	<ol style="list-style-type: none"> <li>Describe a wide range of energy stores in different contexts.</li> <li>Describe changes in energy stores in terms of the process that causes the change.</li> <li>Use quantitative descriptions of changes in energy stores.</li> <li>State and apply the law of conservation of energy in straightforward situations.</li> <li>State the factors that affect the change in the gravitational potential energy store of a system.</li> <li>Calculate the gravitational potential energy store of a system using the mass</li> </ol>	<ol style="list-style-type: none"> <li>Label the constituents on an atom (proton, neutron, and electron) on a diagram.</li> <li>Describe how objects become charged in terms of electron transfer.</li> <li>Identify circuit components from their symbols.</li> <li>Construct a simple electrical circuit.</li> <li>Describe the operation of a variable resistor and a diode and their effects on current.</li> <li>Perform a range of calculations, including rearrangement of the equation <math>Q=It</math>.</li> <li>Measure the current in a circuit accurately and use it to calculate the rate of flow of electrons.</li> </ol>	<ol style="list-style-type: none"> <li>Define 'power'.</li> <li>Calculate the power of systems.</li> <li>Calculate the power of electrical devices.</li> <li>Select an appropriate fuse for a device.</li> <li>Describe how electricity is generated in a power station.</li> <li>Identify the main components of the National grid.</li> <li>Explain the role of the 'step-up' and 'step-down' transformers.</li> <li>Describe the characteristics of the UK mains supply.</li> <li>State simple differences between a.c. and d.c. sources.</li> </ol>	<ol style="list-style-type: none"> <li>Define 'scalar' and 'vector' quantities.</li> <li>Differentiate between distance and displacement.</li> <li>Identify forces as contact and non-contact.</li> <li>State the difference between the mass of an object and its weight.</li> <li>Calculate the weight of objects using their mass and the gravitational field strength.</li> <li>Apply the equation <math>w=mg</math></li> <li>State what the centre of mass of an object is.</li> <li>Find the centre of mass of an object suspended from a fixed point.</li> </ol>

	<p>8. Describe how a gas exerts pressure on a surface.</p> <p>9. Describe and explain how changing the temperature of a gas in a sealed container affects the pressure of the gas.</p> <p>10. Define density.</p> <p>11. Use the density equation to calculate the mass or the volume of an object or a sample.</p> <p>12. Required Practical: Measure the mass and volume of objects and liquids and calculate their densities using the density equation.</p> <p>13. Define specific heat capacity.</p> <p>14. Use and manipulate the specific heat capacity equation to calculate energy/mass/temperature change/specific heat capacity given the others.</p> <p>15. Required Practical: Determine the SHC of a metal block of known mass by measuring the energy transferred to the block and its temperature rise.</p> <p>16. Define the terms specific latent heat, latent heat of fusion, latent heat of vaporisation.</p> <p>17. Use the equation <math>E=mL</math> to</p>	<p>8. Describe the properties of protons, neutrons, and electrons.</p> <p>9. Identify the mass and atomic number by using nuclear notation.</p> <p>10. Calculate the number of neutrons in an isotope by using nuclear notation.</p> <p>11. Describe the differences between isotopes.</p> <p>12. Identify the type of decay taking place from a nuclear equation.</p> <p>13. Complete decay equations for alpha and beta decay.</p> <p>14. Rank the three types of nuclear radiation in order of their penetrating power and range in air.</p> <p>15. Describe how the penetrating powers of radiation can be measured.</p> <p>16. Describe the path of radiation types through a magnetic field.</p> <p>17. Describe the process of ionisation.</p> <p>18. Define half-life.</p> <p>19. Find the ratio of a sample remaining after a given number of half-lives.</p>	<p>gravitational field strength, and height.</p> <p>7. State the factors that affect the size of a kinetic energy store of an object.</p> <p>8. Calculate the kinetic energy store of an object.</p> <p>9. State the factors that affect the elastic potential energy store of a spring.</p> <p>10. Calculate the elastic potential energy store of a stretched spring.</p> <p>11. Describe energy transfers involving elastic potential energy and kinetic energy stores.</p>	<p>8. Define resistance.</p> <p>9. State Ohm's law and describe its conditions.</p> <p>10. Calculate the resistance of a component.</p> <p>11. Required Practical: Measure the effect of changing the length of a wire on its resistance in a controlled experiment.</p> <p>12. Describe the resistance characteristics of a filament lamp.</p> <p>13. Determine the resistance of a component based on information extracted from an I-V graph.</p> <p>14. Compare the characteristics of a variety of electrical components, describing how the components can be used.</p> <p>15. Find the potential difference across a component in a circuit by using the p.d. rule.</p> <p>16. Calculate the current in a series circuit containing more than one resistor.</p> <p>17. Measure the p.d. across parallel circuits and explain any discrepancies.</p>	<p>10. Compare a.c. traces in terms of period and amplitude (voltage).</p> <p>11. Identify the live, neutral, and earth wires in a three-pin plug.</p> <p>12. Discuss the choices of materials used in cables and plugs in terms of their physical and electrical properties.</p> <p>13. Identify a variety of electrical hazards associated with plugs and sockets.</p> <p>14. Calculate the charge transferred by a current in a given time.</p> <p>15. Calculate the energy transferred by a charge passing through a p.d.</p> <p>16. State and apply the law of conservation of energy in a circuit.</p> <p>17. Calculate energy transfer in kilowatt-hours.</p> <p>18. Convert between efficiencies stated in percentages and those stated in decimal forms.</p> <p>19. Calculate the power rating of a device from the energy transferred and the time of operation.</p>	<p>9. Find the centre of mass of a symmetrical object.</p> <p>10. State Newton's Third Law of motion.</p> <p>11. Apply Newton's Third Law to examples of equilibrium situations.</p> <p>12. State Newton's First Law of motion.</p> <p>13. Apply Newton's First Law to explain the motion of objects moving with a uniform velocity and objects where the speed and/or direction changes.</p> <p>14. Define acceleration.</p> <p>15. Calculate the acceleration of an object using <math>a = \Delta v / t</math></p> <p>16. Calculate the resultant force when an object is acted by two forces acting along the same line.</p> <p>17. State what a parallelogram of forces is.</p> <p>18. State what a parallelogram of forces is used for.</p> <p>19. Write down what is needed to draw a scale diagram of a parallelogram of forces.</p>
--	--	--	--	--	--	---

	<p>calculate mass, specific latent heat or energy.</p> <p>18. Describe and explain how energy is transferred by conduction in materials.</p> <p>19. Describe ways to reduce unwanted energy transfers.</p>	<p>20. Plot a graph showing the decay of a sample and use it to determine half-life.</p>		<p>18. Describe the effect on the resistance in a circuit of adding a resistor in parallel.</p> <p>19. Required Practical: Investigate the effect of adding resistors in series and parallel on the size of the current in a circuit.</p>	<p>20. Calculate the charge transferred by a current in a given time.</p>	<p>20. Use a parallelogram of forces to find the resultant of two forces.</p> <p>21. Describe how the acceleration of an object depends on the size of the resultant force acting upon it.</p> <p>22. Describe the effect that the mass of an object has on its acceleration.</p> <p>23. Describe how to calculate the resultant force on an object from its acceleration and its mass.</p> <p>24. State what the inertia of an object means.</p> <p>25. State what elastic means.</p> <p>26. Describe how to measure the extension of an object when it is stretched.</p> <p>27. Describe how the extension of a spring changes with the force applied to it.</p> <p>28. Required Practical: Forces and extension.</p>
<b>Learning Checkpoint Tasks</b>	<ul style="list-style-type: none"> <li>• Changes of states</li> <li>• Density</li> <li>• SHC</li> </ul>	<ul style="list-style-type: none"> <li>• Properties of ionising radiation</li> <li>• Half-life</li> </ul>	<ul style="list-style-type: none"> <li>• GPE and KE</li> <li>• Elastic potential energy</li> </ul>	<ul style="list-style-type: none"> <li>• Series and parallel circuits</li> <li>• Resistance</li> </ul>	<ul style="list-style-type: none"> <li>• National grid</li> <li>• Power</li> </ul>	<ul style="list-style-type: none"> <li>• Newton's laws</li> <li>• Acceleration</li> </ul>

Common Assessment Task	Year 10: Common Assessment 1	Year 10: Common Assessment 2	
Mock Exam (if applicable)			End of year Exam: Full Paper 1
Interleaved Knowledge	Key knowledge acquired previously during the GCSE course: <ul style="list-style-type: none"> <li>• Energy crisis and resources</li> </ul>	Key knowledge acquired previously during the GCSE course: <ul style="list-style-type: none"> <li>• Molecules and matter</li> <li>• Electricity</li> </ul>	Key knowledge acquired previously during the GCSE course: <ul style="list-style-type: none"> <li>• Energy</li> <li>• Radioactivity</li> <li>• Electricity</li> </ul>
