| Core knowledge; Multiples and Factors | Complete |
| :--- | :--- |
| 1. Multiples and Factors - "What is a factor?" |  |
| 2. Prime numbers and prime factor decomposition - "Can all integers be written <br> as the product of prime numbers?" |  |
| 3. Highest common factors - "Can you show multiple methods to find HCF?" |  |
| 4. Lowest common multiples - "Can you show multiple methods to find LCM ?" |  |
| Core knowledge; Equivalence and ordering | Complete |
| 5. Fraction as a quotient - "Is a fraction a number?" |  |
| 6. Equivalence of fractions and decimals - "Is there a decimal equivalence for all <br> fractions?" |  |
| 7. Equivalent fractions - "How do we generate equivalent fractions?" |  |
| 8. Simplifying fractions - "Is simplifying fractions the same as finding <br> equivalence?" |  |
| 9. Division of decimals - "Can I use equivalent fractions to divide decimals?" |  |
| 10. Ordering and comparing fractions - "Do I have to find a common <br> denominator to compare fractions?" |  |
| Core knowledge; Calculations with fractions - Adding/Subtracting | Complete |
| 11. Adding and subtracting fractions - "How do I add a negative fraction?" |  |
| 12. Improper fractions - "Is an improper fraction still a fraction?" |  |
| Core knowledge; Calculations with fractions - Multiplying/Dividing | Complete |
| 13. Relationship between multiplying a fraction and division - "Is a x 1/n the <br> same as a/n?" |  |
| 14. Multiplying fractions - "What is the connection between multiplying <br> fractions and 0.1 x 0.2?" |  |
| 15. Reciprocals - "What two numbers will multiply to make 1?" |  |

## Learning Checkpoints

| Learning Check Title | Score | Dirt |
| :--- | :---: | :---: |
| Multiples and Factors |  |  |
| Equivalence and ordering |  |  |
| Calculations with fractions - Addition and Subtraction |  |  |
| Calculations with fractions - Multiplication and division |  |  |

Year 7 Maths Learning Journey
Summer - Half Term 1: Structure of number - Fractions

## Key Vocabulary

Integer: a whole number that can be positive, negative or zero
Factor: When a number, or polynomial in algebra, can be expressed as the product of two numbers or polynomials, these are factors of the first.
Multiple: For any integers $a$ and $b, a$ is a multiple of $b$ if $a$ third integer $c$ exists so that $a=b c$
Common: Values that are the same.
Highest Common Factor - The common factor of two or more numbers which has the highest value
Lowest Common Multiple - The common multiple of two or more numbers, which has the least value
Prime: A whole number greater than 1 that has exactly two factors, itself and 1.
Equivalent: equal in value, amount, function, meaning, etc.
Fraction - the result of dividing one integer by a second integer
Decimal - where the tenths, hundredths, thousandths etc. are represented as digits following a decimal point
Numerator: in the notation of common fractions, the number written on the top - the dividend (the part that is divided).
Denominator: In the notation of common fractions, the number written below the line
Vinculum - the horizontal line in a fraction which indicates that values are to be operated on as a single entity
Reciprocal: The multiplicative inverse of any non-zero number
Simplify: Reduce to its simplest form.
Cancel: when the numerator and denominator are both divided by their highest common factor the fraction is said to have been cancelled down to give the equivalent fraction in its lowest terms
Improper fraction : a fraction where the numerator is greater than the denominator
Unit fraction: A fraction that has 1 as the numerator and whose denominator is a non-zero integer
Mixed Number: A whole number and a fractional part expressed as a common fraction. Example: $2 \frac{1}{4}$ is a mixed number. A mixed number is also referred to as a fraction.
Quotient: The result of a division.
Commutative: Addition and multiplication of real numbers are commutative where $a+b=b+a$ and $a \times b=b \times a$ for all real numbers $a$ and $b$.
Associative: A binary operation $*$ on a set S is associative if $\mathrm{a} *(\mathrm{~b} * \mathrm{c})=(\mathrm{a} * \mathrm{~b}) * \mathrm{c}$ for $\mathrm{all} \mathrm{a}, \mathrm{b}$ and c in the set S . Addition and multiplication of real numbers is associative
Distributive - One binary operation $*$ on a set S is distributive over another binary operation $\bullet$ on that set if $\mathrm{a} *(\mathrm{~b} \bullet \mathrm{c})=$ $(\mathrm{a} * \mathrm{~b}) \cdot(\mathrm{a} * \mathrm{c})$ for $\mathrm{all} \mathrm{a}, \mathrm{b}$ and $\mathrm{c} \in \mathrm{S}$
Equal Priority: When operations are given the same importance in the order of operations Order of operations - Generally, multiplication and division are done before addition and subtraction, but this can be ambiguous, so brackets are used to indicate calculations that must be done before the remainder of the operations are carried out.
